

Tagging Procedure – Risk Waste Collection

Your site will be provided with a stock of bin tags. It will be your responsibility to tag all **wheeled bins** prior to collection by Stericycle. These bespoke tags contain unique barcodes identifying each site and allow us to electronically track the movement of waste from point of collection through to the treatment facility. Please note you should also continue to cable tie all yellow bags and sharps containers.

HT - Normal Waste (Orange)

All sites will be provided with UN Approved lockable wheeled bins (free of charge) for the on-site storage of yellow risk waste bags, sharps containers and yellow lidded rigid containers. The **ORANGE** tags should be attached to the handle of the wheeled bin.

It is important to ensure no purple or black lidded containers are placed in the wheeled bins. Please notify us when you have these items for collection, using the contact details below.

Please keep tags in a safe place. If the bin is not tagged, our driver will not be able to collect your waste.
